Recording a video

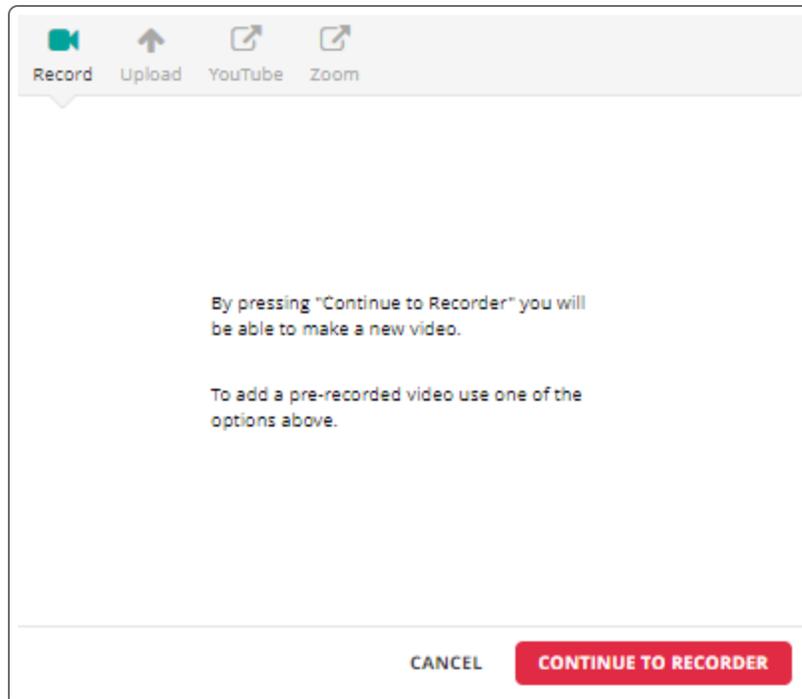

Follow these steps to record a video in GoReact. If you are going to upload your video instead, see [Uploading a video](#). If you are going to use a mobile device, see the [Mobile device guides](#).

- 1 Select the applicable assignment and click "Start Assignment."

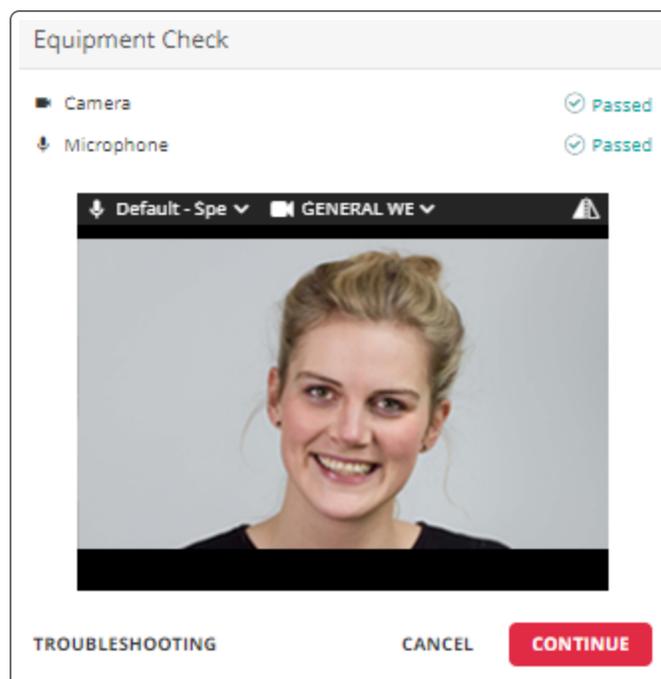

- 2 Add an optional title and click "Continue."

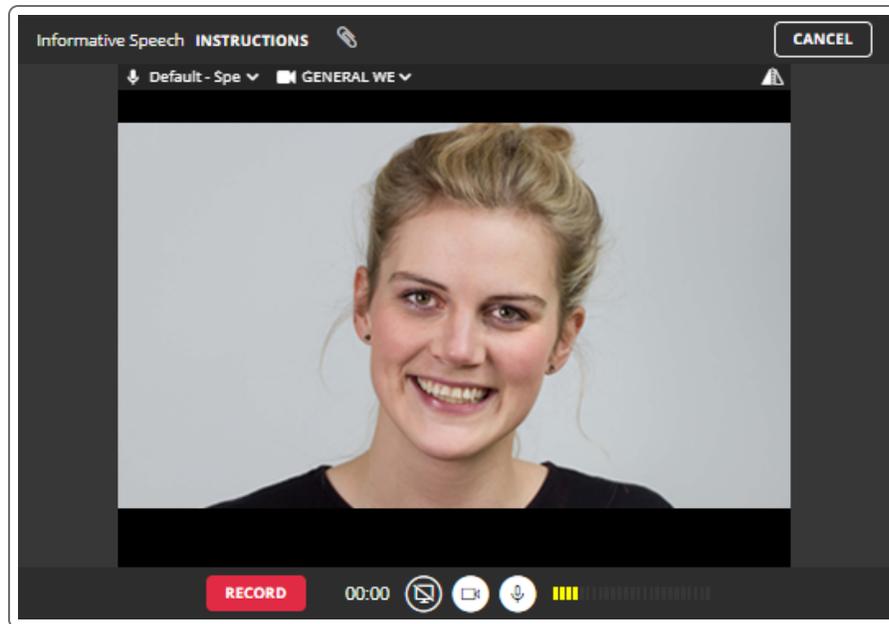

3 Click "Continue to Recorder."

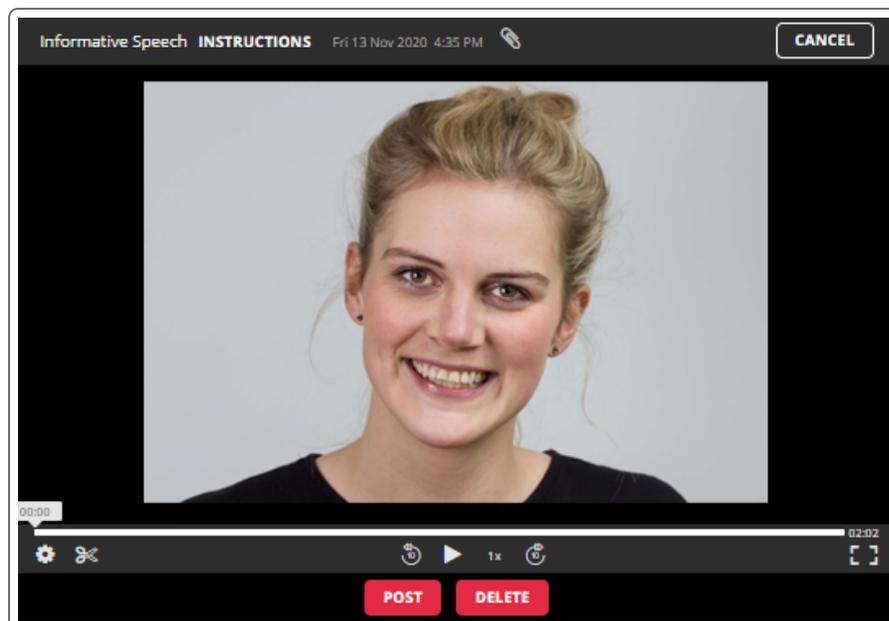

4 If you see the Equipment Check and it passes, click "Continue." If your equipment check fails, see the [Enabling your camera and microphone guide](#).

- 5 Once you are on the recording screen, click "Record."

- 6 If you need to pause your recording, click "Pause."
- 7 When you are finished recording, click "Finish."
- 8 Depending on the assignment type and settings, you have a few options here. You can "Post" the video, "Delete" the video, or Trim the video.

- 9 Once you post your video you will see it on the dashboard and your teacher will be able to review it and provide feedback.
